EDUCATION

Course	College / University	Year	CGPA / %
B. Tech (Electrical Engineering)	Netaji Subhas University of Technology, Delhi	2027	7.73
CBSE (Class XII)	Navyug Senior Secondary School, Delhi	2022	86%
CBSE (Class X)	DAV Public School, Delhi	2020	95%

EXPERIENCE

Associate Product Manager | Bachatt (Fintech) *May 2026 – July 2026*

- Launched a new **credit-card product line** with partner ZET — owned the spec and PRD, defined the activation funnel and success metrics, and cut v1 to the smallest shippable slice so the riskiest assumption was validated with real users before further investment.
- Built the **credit-card reporting layer** end-to-end — a per-user journey view on **BigQuery** MIS data scaled from one partner to **four** (ZET, IOB, Uni, Bajaj), plus the daily funnel report that pulls each partner's MIS from the mailbox into one scheduled workbook — turning a launch we could ship into one we could measure.
- Ran **conversion experimentation** on the credit-card landing site: four themes as live variants with GA4 and CleverTap events on Apply Now and scroll depth, and the active theme attached as a global analytics parameter so variants were genuinely comparable rather than merely live.
- Owned delivery as **Scrum Manager**: lifted sprint completion from **40% to 75%** and cut standup from 30 to 20 minutes, returning roughly two engineering days per sprint; killed manual status-chasing for a 10+ person team with a two-way Plane↔Slack tool.
- Made the **build-vs-buy call** on the team's tooling stack and executed the Atlassian to self-hosted migration end-to-end (Plane + Outline on Azure AKS), removing a recurring per-seat licence cost.

Brand Marketing Intern | CashKaro *Mar 2026 – Apr 2026*

- Owned the NSUT campus growth pilot end-to-end — sized the addressable base, modelled per-user unit economics and shipped a **30-60-90 day GTM plan**.
- Instrumented the **install → signup → first-transaction funnel** and converted **40+ students in under 3 weeks**, identifying hostel residents and high-frequency online shoppers as the highest-converting cohorts and retargeting them.

PROJECTS

Findesk — Equity Research & Systematic Strategy Platform | *Python, TypeScript, Next.js, Supabase* Live

- Built and backtested a **value + momentum equity strategy** over a **715-stock NIFTY-500 universe** — ranked on earnings yield (EBIT/EV) and 6-month momentum, with a ₹5,000 cr market-cap floor and a 3-name-per-sector cap.
- Built the **testing and validation framework** around it: results measured net of **0.5% round-trip cost** (STT + slippage) and **12.5% LTCG**, monthly mark-to-market for true max drawdown, volatility and Sharpe against a 6% risk-free, sub-period splits to test regime dependence, and a **t-stat on non-overlapping cohorts**.
- Shipped **0-to-1 to six live surfaces** (research terminal, mechanical screen, portfolio tracker, paper-trading desk, compare, watchlist) on authenticated accounts with row-level security and **89 unit tests**.

Product Analytics Dashboard & Growth Case Study | *Python, SQL, pandas, Streamlit* Live

- Turned a real **2.7M-event** e-commerce clickstream into conversion funnels, cohort-retention curves and a churn model, with every view ending in a plain-English insight rather than a chart.
- Wrote the accompanying **growth case study**: **2.45%** of viewers add to cart and **28.04%** of those buy (0.83% end to end); the worst-converting pocket is new visitors with single-item carts at **23.86%** — which is also **65% of all cart activity**, making it both the weakest step and the largest one.
- **Sized the experiment before proposing it** — a 5% relative MDE needed ~17 weeks at observed traffic, so the test was re-specified at +10% over ~4.5 weeks with the blind spot stated; kept the finding that contradicted the hypothesis (multi-item carts convert *better*) rather than smoothing it.

Delhi-NCR Air Quality Analytics | *Python, statsmodels (SARIMA), Streamlit* Live

- Reconciled **11 years** of CPCB data across 3 validated sources; isolated trend, seasonality and event effects (Diwali, stubble burning, COVID) and beat the naive baseline on a **30-day holdout (MAE 24.7 vs 29.6)** — then translated it: Delhi's PM2.5 runs **23x the WHO annual guideline**, ~5 cigarettes a day from breathing.

Scrum Dashboard — Sprint Health & Standup Tooling | *Next.js, TypeScript, Postgres* Live

- Built the ceremony layer our work tracker lacked — standup runner, sprint-health header, workload-by-person, blocker tracking and an async digest — filling the gap for product managers without replacing the tool teams already lived in.

POSITIONS OF RESPONSIBILITY

- **Executive Committee, PM Club (NSUT)**, Sep 2025 – Present — run weekly product case sessions for **50+ members** and teach RICE, North Star metrics and JTBD to juniors new to product analysis.
- **Logistics Coordinator, Moksha & Resonanz (NSUT)**, Mar 2024 – Present — ran live operations for **50+ events across 6 venues** at North India's largest college festival (20+ volunteers, 15+ vendors), closing both days with **zero escalations**.

ACHIEVEMENTS & CERTIFICATIONS

- Co-authored a **peer-reviewed research paper** on solar-cell performance enhancement — *Physica Scripta* (IOP Publishing).
- Solved **600+** data-structures and algorithms problems on **LeetCode**, **Pupil on Codeforces**.
- **Gold Medallist**, NPTEL Programming in Java (IIT-certified). Certifications: SQL Bootcamp (Udemy), Power BI (Microsoft), Product Management Fundamentals (Coursera).

SKILLS

Product: PRDs & roadmapping, 0-to-1 launches & GTM, user research & discovery, RICE prioritisation, North Star & AARRR metrics, funnel & cohort analysis, A/B testing & experiment design, competitive benchmarking, Agile/Scrum & sprint planning

Analytics & Data: SQL / PostgreSQL, BigQuery, Python (pandas, NumPy, statsmodels), Advanced Excel, Power BI, Streamlit, GA4 & CleverTap instrumentation, cohort & retention modelling, churn modelling, time-series forecasting (SARIMA)

Business & Markets: Unit economics, build-vs-buy analysis, equity valuation (P/E, PEG, EV/EBIT), factor strategies, backtesting & survivorship bias, hypothesis testing & t-statistics, P&L accounting

Tools: Jira / Plane, Confluence / Outline, Figma, Slack API, Git, Azure | **Interests:** Equity markets, competitive programming
